

RETREAT MEADOW WELLS

The Retreat Meadows wells and treatment plant were constructed in the 1960's and 70's in response to a series of dry years. At that time, water was not metered and summer usage was higher than it is today. This plant had not supplied water to customers since 1989 when the Pleasant Valley Filtration Plant was constructed. It has been kept operational during this time, but was in need of modernizing upgrades. With the dry year we have experienced in 2001 and a slight increase in demand each year we plan to begin using this plant on a regular basis. Pleasant Valley will remain our primary supply and the Wells used as a supplement.

This plant is located on Route 30 just north of the Brattleboro Retreat. Plant upgrades completed in 2003 included new chemical feed systems, modern control systems for the filters and a loading door for taking deliveries. The facility is operated 2 days per week for a few hours each day.
